

BIOFUELS GROUP - LEITAT

BIOFUEL PRODUCTION

Summary

Different technologies can be developed /applied to study the biofuel production rates from different sources at a development level:

- Bioprocess development for ethanol production (bioreactor facilities)
- Bioprocess development for biodiesel production from different fats and oils
- Biodiesel from microalgae (study at a lab scale)

Applications

This technologies could be of the interest of several companies ranging from biodiesel and biotechnol producers to other companies producing enzymes or technology who want to develop and test new processes and products
